Vacuum Manifolds and AIRFREE® Products (excerpt from product line)

→ pls. also see page 45

Chemglass Airfree® glassware has been designed for the convenient manipulation of highly reactive and moisture sensitive compounds using inert gas to exclude air and moisture. It is a very comprehensive line of glassware designed for organometallic and inorganic chemistry. Available are a wide range of Complete Manifold Systems as well as individual components and a large variety of accessories, including adapters, bubblers, reaction flasks, vacuum gauges and pumps (see examples below). **Please enquire for further product information.**

AF-0450-01	5-Ports Vacuum Manifold, Right Handed Trap Assembly, Double Bank
AF-0450-02	5-Ports Vacuum Manifold, Left Handed Trap Assembly, Double Bank

Bubblers, Pressure Release, Lafler, Airfree®, Schlenk

A: Inlet
B: Outlet
C: Main Chamber
D: Check Valve
E: Pressure Release Chamber

Unique design of bubbler allows for fine control of purge gas within an inert gas system such as a manifold. Purge gas enters bubbler through hose connection (A) and exits through connection (B) which is connected to manifold. The large capacity of the main chamber (C) allows for rapid purging with check valve protection of the inert gas source (D). The constriction of the large chamber prevents oil from being drawn back into the system. The small chamber (E) is equipped with a pressure release valve which is adjustable from 2 to 49 PSI (4 PSI is recommended for most vacuum, inert systems). When charging the system to the correct pressure setting, the bubbler in the main chamber will cease to operate and permit any over-pressure to escape through the small chamber (E).

Please note: Chamber (D) and (E) must be filled halfway with mineral oil for proper operation.
 Approx. dimensions are 150 mm width x 300 mm height.
 Hose connections are 11 mm outer diameter at the largest ring.

Pressure vessels are tested at 150 PSI (10,34 bar) or approximately 2,5 times their recommended working pressure of **60 PSI (4,15 bar)**. However, we do not guarantee the vessels from breaking under pressure due to the nature of the material and conditions beyond our control. We recommend the use of safety shields and/or other safety utensils.

ChemRxnHub Benchtop and Large Capacity Process Reactors

ChemRxnHub benchtop process reactor systems come complete with benchtop stand, overhead stirrer and glassware. Manifold connection and heat transfer fluid draining system are optionally available. The unique design of the support stand and clamping system allows quick and easy installation/removal of glassware and fits into most benchtop hoods. For the parallel utilization of two or three reactors, dual and triple support stands are available.

For bigger volumes comparable systems up to 150 l can be offered based on your individual needs. Reactor vessels are available jacketed or unjacketed, and 50 l and 100 l vessels with a tall or low profile.

Filter reactors with volumes from 1 l to 50 l and distillation kits to be used in combination with our process reactors can be offered.

For individualized systems a broad choice of reaction vessels down to 100 ml with/without drain valve and with/without baffles as well as a range of glass or PTFE lids with 3 to 9 necks are available.

For all process reactors a big variety of accessories like adapters, circulators, glassware, heating mantles, probes, and sensors are available or can be manufactured according to your individual requirements.
